B. Amendment to the Claims

A listing of all claims in the application is provided.

1. (Currently Amended) A porous <u>article comprising</u>:

a substrate; and

a porous material formed on the substrate, the porous material comprising a plurality of columnar pores and an area surrounding the pores, the area being an amorphous area containing C, Si, Ge or a combination thereof,

wherein the porous material is formed on a substrate and the depth direction of the columnar pores is substantially perpendicular to the substrate.

- 2. (Currently Amended) [[A]] The porous material article according to claim 1, wherein the columnar pores are substantially unbranched.
- 3. (Currently Amended) [[A]] The porous material article according to claim 1, wherein the average interval between the centers of adjacent pores is 30 nm or less.
- 4. (Currently Amended) [[A]] <u>The porous material article</u> according to claim 1, wherein the average diameter of the columnar pores is 20 nm or less.
- 5. (Currently Amended) [[A]] <u>The porous material article</u> according to claim 1, wherein the plurality of pores have substantially the same depth direction.

- 6. (Currently Amended) [[A]] The porous material article according to claim 1, wherein the area contains aluminum.
 - 7-22. (Cancelled)
 - 23. (Currently Amended) A filter <u>prepared by a method</u> comprising:

 <u>providing</u> the <u>article porous material</u> of claim 1; and

 <u>separating the porous material from the substrate</u>.
 - 24. (Currently Amended) A mask <u>prepared by a method</u> comprising: <u>providing</u> the <u>article porous material</u> of claim 1; <u>and</u> separating the porous material from the <u>substrate</u>.
